

Puzzle

"To mention a few"

by John de Cuevas

Instructions: The sixteen words defined by the numbered clues are to be entered from left to right in the correspondingly numbered rectangles. Letters that fall in numbered squares should also be entered in the correspondingly numbered spaces on the books above. Letters that fall in blank squares of any two joined rectangles (1 and 3, 2 and 4, etc.) should be anagrammed to form a new word, and the new word should be entered in the adjoining rectangle. Once again, letters that fall in numbered squares should be entered in the correspondingly numbered squares on the books. Letters that fall in blank squares of each pair of adjacent central rectangles anagram to an appropriate seven-letter word to be entered in the squares of the topmost grid. Words that belong in the central rectangles are defined by unnumbered clues in random order. Since two of these words happen to be anagrams of one another, the clue to the one that occurs first, both alphabetically and in the completed grid, is marked with an asterisk*.

Clues:

1. Reader has different work in time of prosperity
2. Mass about armed conflict, wall of defense
3. Turbulent tide engulfs multitude, turning explosive
4. Broken limb in the cup of sewer
5. Washing a lion, but shakily
6. Determine constituents of collection by chemical decomposition
7. Yttrium chloride in an instant produces child's conveyance
8. Outbreak of cholera inspires hymn
9. Producer of fodder has knockout punch
10. Fighter brother has hole punch
11. Housebreaking by keeping regular shift without error
12. As far as one can see, hydrogen constellation holds atomic number
13. Teach in Stuttgart, University of Connecticut
14. Almost able to read repeat
15. Play *go* (my shuffle) with a few mates
16. Boston University environment: taurines and songbirds

Mary, Luke made new skullcap

Important panel for computer function

*Form of writing unpropitious in a hillside

Fantastic sound of marketplace

Principal involved in some political disorder

Solid secretary is extremely lonesome

Caliber always includes political stance

High temperature vessel a severe test

This puzzle appeared in the March-April 1991 issue of *Harvard Magazine* in a different format.
